AI PLATFORM

Spruce up business intelligence with actionable insights, driven by AI

AI is becoming a business driver of enterprise across all major industries to improve business operations and make faster business decisions. But there are certain challenges to AI adoption in an organization, such as a shortage of data scientists, the time-consuming nature of AI projects, and the inability to deliver promised value from AI projects.

Subex has launched a cloud-native, drag-and-drop, no-code, distributed computing-enabled enterprise AI platform that democratizes AI across the entire data value chain and helps enterprises scale AI initiatives to overcome the challenges to AI adoption in an organization.

Reach us at **hypersense@subex.com** to learn more.

FEATURES

Whet your business edge with powerful tools

End-to-end AI Platform
Enables enterprises to make faster, better decisions by leveraging AI across the data value chain.

AI Democratization
An end-to-end multipersona DSML platform that helps democratize AI, bringing its value to an ever-larger audience of business experts.

Full-fledged MLOps module
Leverage robust MLOps capabilities to monitor, maintain and govern ML operations on top of deploying models anywhere on anything to get better business results.

Explainable AI
Enable enterprise users to understand the reasons behind model behaviour and ensure transparent and ethical decision-making.

Automated Machine Learning
Simplify and accelerate complex, time-consuming operations like data preparation, feature synthesis, feature engineering, and model selection for quick experimentation.

Enterprise Feature Store
Avoid repetition of feature engineering every time you create a new pipeline. The features built once can be stored, discovered, and accessed on demand.

Pre-built Use Cases
Pre-built use cases are made available across the organization to serve as a reference for users to build their tailor-made use cases.

Plug-and-Play
Modularized design enabling plug-and-play functionalities due to the composability of the platform via APIs.

BENEFITS

Amplify revenue with an AI platform

An end-to-end AI platform that accelerates the data to insights journey.

Broadens data analytics and AI/ML avenues to anyone in an organization with No-Code AI.

Ensure transparency in decision-making and eliminate bias through 'Explainable AI' capabilities.

Enable business users to become Citizen Data Scientists and align AI initiatives to business outcomes.

Improves business outcomes, including top-line growth, bottom-line returns, etc.

SUBEX

HyperSense AI Platform is a brainchild of Subex, a pioneer in enabling Digital Trust for businesses across the globe. Subex helps businesses embrace disruptive changes and succeed with confidence in the digital world.
