

Low-Code Security Automation is Your Modern SOAR

Automate in and beyond the SOC. Ingest, enrich and action telemetry at the point of threat inception with machine-speed.

→ SWIMLANE VS. OTHERS

Low-code security automation is the sweet spot between legacy full-code and no-code tools.

Resource Optimized! Not Resource Intensive

While legacy full-code automation tools are known to be complex and require dedicated developers to build playbooks, Swimlane's low-code approach empowers security teams to be more efficient with their time.

No Vendor Lock-In

Don't take the bait that good-enough automation from one larger, bundled security offerings will meet your needs. Only Swimlane allows you to automate in and beyond the SOC without locking you into a prescriptive tech-stack.

Robust Case Management & Reporting

No-code automation = no case management. Unlike smaller no-code providers, only Swimlane provides the robust case management, dashboarding and reporting that brings humans into the loop of automation.

Your Use Cases how You Want Them

As your business and security organization evolves, so does the need for security automation to evolve to less-common use cases in and beyond the SOC. This is where Swimlane's low-code approach shines.

The **Largest** Independent Security Automation Company on Earth

Swimlane is the leader in low-code security automation. The Swimlane Turbine platform unifies security operations in-and-beyond the SOC into a single system of record that helps reduce process and data fatigue, while helping security leaders overcome chronic staffing shortages and more easily quantify business value and the efficacy of security operations.
